

# ROTARY MOPS & BRUSHES

Our range of rotary mops and brushes offers a wide selection of choice for all shoe cleaning, polishing and finishing operations.

Only high quality materials are used in the manufacture of our mops and brushes to ensure they maintain their shape and give optimum performance. Matured wood is used for the centre core to prevent warping, cracking or distortion. Egyptian cotton, seersucker, yarn, bristle and horse hair are used for the fill to increase performance and prolong usage.

The next few pages give you a comprehensive guide to our range of mops and brushes. Details of the suggested application and product references are listed together with the corresponding dimensions of the mop or brush.

Whilst we offer a wide variety of mops and brushes in our stock range, we can also supply specials on a made-to-order basis.
